2.3.1 Transmit Power

The user configures Impinj R700 transmit power, the conducted power available at the RF port on the reader. For all Impinj R700 reader models, the reader will limit the maximum transmit power to 30 dBm while configured to use PoE power. When configured to use PoE+ power, the reader may allow for a higher maximum transmit if the region allows for it. The Impinj R700 will only present valid output powers for the region it is configured to operate in. For additional information on how to properly set transmit power to comply with regulatory rules, refer to the Impinj R700 Installation and Operations Guide. For additional information on the differences between PoE and PoE+ power refer to section 2.4.1 of this datasheet.

2.3.2 Gen 2 Reader Modes

The Impinj R700 includes support for two types of reader modes: static and dynamic. The number of modes varies per region and comply with regulatory agencies. For additional detail on Reader Modes visit the Impinj Support Portal.

2.3.3 Read Rate

The Impinj R700 read rate varies depending on the reader configuration and number of tags in the field of view. The maximum read rate can only be achieved while using reader mode 0 in an FCC-like region.

2.3.4 Receive Sensitivity

The receive sensitivity of the Impinj R700 varies depending on the RF mode chosen to perform Inventory. Applications that require the lowest (i.e. best) receive sensitivity should choose Dense Reader M8 mode. To learn more about reader modes and receive sensitivity, visit the Impinj Support Portal.

2.4 Connectivity

Table 5: Impinj R700 Connectivity Specifications

Specification	Description
Network	10/100/1000 Base-T Ethernet (RJ45)
Antenna Ports	4 monostatic ports (RP-TNC)
USB	3 Type A host, 1 micro device
Power	PoE (802.3af), PoE+ (802.3at) with LLDP for power negotiation
General Purpose I/O	3 out, 2 in optically isolated
General Purpose I/O Header	Phoenix Contact 9 pin 3.81 mm pitch

2.4.1 Power

The Impinj R700 is powered exclusively through Power over Ethernet (PoE) or PoE+ via the ethernet port. For applications where the reader is not connected to a PoE capable switch, users can apply a midspan injector to add inline power to a network connection via a power supply. By default, the Impinj R700 will attempt to negotiate power using Link Layer Discovery Protocol (LLDP). If the negotiate fails, the Impinj R700 will default to using PoE power.

Impinj recommends PoE+ power when using the Impinj R700 to source power to external USB devices or through the general-purpose outputs.

2.4.2 GPIO

The Impinj R700 utilizes a Phoenix Contact 9 position 3.81 mm pitch header to expose the GPIO signals. To connect external signals, a matching terminal block must be installed. Pin 1 is located nearest the push-pin factory reset button.
