TOSHIBA

B-EX4T1 gets even better.

Extra memory and functions added to improve performance.

The upgrade

The B-EX4T1 has proven itself as one of the best industrial barcode labelling workhorses available since its launch. From March 2022, the memory in the B-EX4T1 has more than doubled which makes the printer better than ever. This change has brought new capabilities to the printer that are available on our latest devices.

Improvements and functions

OTF font support

- The extended memory enables multi-lingual printing support for international shipping. Customers can use their own font design for marketing & corporate identity.

GS1 QR code support

- The GS1 QR code combines the GS1 system for transport & logistics with product information for consumers in the one code.
- The big advantage for both users is, they can easily read the code with any modern mobile device with a camera.

Improved cutter throughput

- The new model has an increased performance when cutting, enabling more labels produced per minute.

Identifying the improved B-EX models

- All B-EX4T1 printers produced from February 2022 are equipped with the upgraded memory and firmware.
- B-EX6T1/T3 printers produced from End of March 2022 come with the new features.

Upgraded RFID functionality

- The new RFID analyse tool launched with the BA400 now supports the B-EX4T1.
- This tool ensures that any user can easily setup new RFID tags so that they print and program correctly without the need for specialist RFID knowledge.
- For experts who need to get a deeper understand of the RFID tag performance within the printer, it is now very easy to analyse new RFID tags and get the perfect settings for optimal performance.

Upgrading other models

- Other models in the B-EX range will also get the cutter and GS1 code changes. See the overview below.

	B-EX4T1	B-EX4T2/D2	B-EX4T3	B-EX6T1/T3
Memory	FROM 64 MB SDRAM 64 MB	no change	FROM 64 MB	no change
OFT font support	yes	-	-	already supported
GS1 QR code support	yes	yes	yes	yes
Increased cutting speed	yes	yes	yes	yes
RFID calibrate tool support	yes	-	-	yes
